EDUCATION

Griffith University **Brisbane, Australia**
Bachelor of Software Engineering 2013 - 2018

EXPERIENCE

Misfits Gaming Group **Remote from Los Angeles, California**
Lead Software Engineer (Game Developer) **November 2023 - Present**

- Helped develop original Roblox IP resulting in an experience with more than a million visits in its launch week
- Worked closely with influencers, leadership and stakeholders to design an innovative game
- Developed using the latest Roblox tools including React, Rojo, Lune, HoarceKat and Knit
- Mentored junior engineers to help them grow as well as assist in up skilling them in unfamiliar areas
- Created reusable components for telemetry events, UI and backend services shared between multiple games
- Developed scripts using Python and JavaScript to help automate exporting data from Google Sheets for designers to be able to seamlessly update game data without the need of a developer

Splash **Brisbane, Australia / Los Angeles, California**
Lead Software Engineer (Game Developer) **December 2021 – June 2023**

- Working with Lua and using Roact and Rojo to help develop a top 100 Roblox game
- Developing new core gameplay features including multiplayer experiences, queue systems, storing and sharing large sets of data with other players, leaderboards, loot crates, inventory and shop systems and a variety of other complex backend tasks
- Developing the front end user interface for a majority of our gameplay features
- Handling weekly production deployments
- Creating events for tracking player statistics for analysis

Codafication **Brisbane, Australia**
Software Engineer (Full-stack Developer) **January – December 2021**

- Developing reusable React components
- Developing features using JavaScript and TypeScript
- Maintaining and updating databases using Postgres
- Managing deployments with Kubernetes/Docker

Coin Crew Games **Los Angeles, California**
Junior Software Engineer **February 2020 - June 2020**

- Contributed to the development of prototyping arcade games using Unity
- Interacted with clients during meetings to discuss project ideas
- Helped with the wiring, hardware installation and software setup of arcade cabinets
- Created detailed wiring diagrams of arcade cabinets to be used for manufacturing purposes

Queensland Micro- and Nanotechnology Centre **Brisbane, Australia**
Junior Software Engineer **November 2017 - July 2018**

- Developed a fully automated system with batch processing from scratch
- Tracks and analyze droplet images using MATLAB's Image Processing Toolbox
- Formulated methods to calculate a droplets advancing & receding angle using the data collected
- Created algorithms to determine the location and size of droplets
- Obtained more accurate measurements faster than current systems

Activate Entertainment **Brisbane, Australia**
Software Developer **July 2016 - November 2016**

- Designed and developed an iPad game to teach kids Empathy using Unity
- Made use of Vuforia to create an augmented reality experience
- Created an assortment of minigames using C# that implemented research into helping teach children the feeling of empathy

ADDITIONAL

- **Languages:** JavaScript, TypeScript, Python, SQL, C#, Lua
- **Web development:** HTML, CSS, Tailwind, Javacsript, Selenium, NodeJS, EJS, React
- **Development Tools:** Unity, Eclipse, Github, MATLAB, Visual Studio
- **Roblox Development Tools:** Roblox Studio, Knit, Rojo, Lune, React
- **Database:** GraphQL, Oracle SQL, PostgreSQL
- **Other:** Kubernetes, Docker, MobX
